

Turn the outer container right side out.

Leave the lining one wrong side out.

Place the outer one inside the lining, placing the side seams on opposite sides.

Pin around the top carefully lining up the top edges. Place it over the free arm of your machine and stitch 1/4 Inch seam around the top.

Pull the outer container through the gap in the side seam of the lining, until you have the whole thing right side out.

Stitch up the gap in the side seam, by hand or machine.

Carefully push the lining inside the container. If you roll the seam at the top between your fingers you can push the seam out so it is right on the top edge.

Pin around the top edge to hold it in place.

Place it over the free arm of the machine again and top stitch around the top 1/4 inch in.

Fold the top of the container over to the outside 2 inches to form the contrast collar press in place.

Using your polyester boning cut the following

Large container                      22 inch piece

Medium container                    19 inch piece

Small container                      16 inch piece

Place the boning up under the folded collar around the top of the container, it should overlap approx 4 Inches. This can now be removed for washing.

Your container is now finished.

All three are made the same way.
